*OSIXO OS 05 special coating fluid*

## REDUCING THE GWP VALUE FROM 320 TO 60

### **H. Costenoble GmbH & Co. KG**

#### **Hall 4 | Stand 4210**

OSIXO® OS 05 (see image) has been successfully used to prevent squeaking and creaking noises in vehicle interiors for many years. It is used wherever high material compatibility, a permanent and reliable effect, low volatilisation and a wide operating temperature range are required. A new generation of this universal problem-solver is now being launched on the market. Its name: "OSIXO® OS 05 ECO". This new product variant has enabled the manufacturer to use a new solvent and thus reduce the GWP value from 320 to 60. OSIXO® OS 05 ECO is particularly designed for users who would like to or have to take account of their increased responsibility towards the environment. After all, the path to achieving a low-emission and environmentally friendly car requires a rethink from all participants involved in the production chain. With OSIXO® OS 05 ECO, Costenoble contributes to achieving this aim.
